

OM-MMK

Magnetic Mounting Kit for OPTImizer Circuit Breaker Monitor

The OM-MMK allows the INCON OPTImizer to be mounted permanently to a circuit breaker control panel, cabinet wall or door without drilling holes. The four powerful magnetic feet are easily installed on the OPTImizer and simplify its mounting to the breaker.

Installation:

- For OPTImizer, place a clip nut on each of the four holes in the mounting flange.
- For UPSM, place a #10 screw through the hole in a magnetic foot and screw into the mounting hole in the bottom of the plastic enclosure – tighten.
- For OPTImizer, place a #8 screw through the shoulder washer first, then through the hole in a magnetic foot and screw into the clip nut on the OPTImizer – tighten.
- Repeat for all four feet.
- The device can be magnetically mounted to any flat steel cabinet or panel surface.
